

### Technical Specification

**Mains supply:** 230 V AC 30VA  
(115V available to order)  
IEC Male

**Dimensions:**  
2U 19" rack mounting,  
overall depth 100mm

### Talkback Unit TLK-10 & TLK-CCU

The Alice TLK10 talkback units are designed for instant communication between studios, newsrooms and other technical areas. Each unit has 10 individual push-to-talk buttons allowing selection of destination as well as a talk-to-all-stations feature. Incoming talkback illuminates the sender's button for ease of reply.

Complicated wiring is avoided by use of quick-to-install twisted-pair ribbon cable between each station and a central connection unit (TLK-CCU). A 9-way D-type connector allows logic signals for mute of external monitoring systems or of the internal talkback loudspeaker. The TLK10 is 2U 19" rack mounting, with a depth of only 100mm to allow easy installation into studio acoustic tables. Push-to-talk buttons can be easily labelled. The TLK-CCU central connection unit is 3U 19" mounting.

Ribbon cables fitted with connectors at both ends can be supplied to special order, price on application.

The system is also fully compatible with the Alice Air 2000 broadcast mixer talkback module 2010.
